TOP URGENT

Dear Raimondas

Good morning

Please note that use ABCON didn't stop leakage lubeoil from sterntube in the full. We are reduced leakage in general on 90%, but when engine start and variable RPM in port, we have small leakages from sterntube. Areas of pollution approx. 15x15m, because we used gear oil inside sterntube.

Due a ballast condition leakage was every day 2,5 ltr, now 0,2 ltr

Due a laden condition, leakage was every day 0,5 ltr, now 0 ltr.

In the port or variable RMP – 0,1 -0,2 ltr

Now we have added 40ltrs of ABCON, 10 additional liters will be added soon. Total volume of oil is 560 Ltrs.

Best Regards

Mr. Ilya Kudryavtsev

Marine Superintendent
